

Training on GHG Emission Inventory

(ISO 14064, Carbon Footprint)

Climate change is recognized as a significant manmade global environmental challenge which will continue to influence our generations to come. In order to sustain a profitable and sustainable growth in a resource constrained world, companies need to follow the path of low carbon growth. Companies need to understand and manage their GHG risks and opportunities in order to ensure long-term success in a competitive business environment. ISO 14064 is an international standard which provides guidance for Developing GHG emission Inventories. GHG emission inventory provides Business with information that can be used to build an effective strategy to manage and reduce GHG emissions. It helps in building stakeholder trust and Reinforces Commitment towards Responsible Business.

Course Structure

The course has been designed to cover requirements of ISO 14064-1 standard. It include combination of tutored sessions, case studies, exercises and discussions. The topics covered during the course include Design and Development of Greenhouse Gas Emission Inventory, Quantification of GHG emissions and preparation of GHG emission inventory report. The course will also briefly cover requirements for Companies to become Carbon Neutral as per PAS 2060:2014.

Who Should Participate?

The training is aimed at a varied audience including Sustainability, Climate Change and environmental consultants, Sustainability Managers, Energy Managers and officials involved in companies aiming to prepare Sustainability reports, manage energy consumption, Reducing GHG emissions and becoming Carbon Neutral.
